

### **Features**

- Hot Pluggable QSFP-DD form factor
- Operating data rate 425Gbps
- Single +3.3V power supply
- Duplex LC UPC connector
- Max power dissipation <9W
- Up to 10km transmission on single mode fiber (SMF)
- with FEC
- 1310nm EML laser
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

# Compliance

- Compliant with QSFP-DD MSA
- IEEE 802.3cd
- RoHS
- Class 1 Laser

# **Applications**

- 400G Ethernet
- Data Center Interconnect
- Transport across data centers
- Switches with QSFP-DD ports

### **Description**

The QDD400G-LR4-10 is a high-performance, single-mode optical transceiver module designed for 400 Gigabit Ethernet applications. It supports data rates of up to 425 Gbps and is optimized for long-reach communication, with a maximum transmission distance of up to 10 kilometers over SMF. This QSFP-DD module operates using four wavelengths (1271nm, 1291nm, 1311nm, and 1331nm) multiplexed into a single duplex LC interface, making it ideal for high-speed data center interconnects, enterprise networks, and telecommunications infrastructure. The QDD400G-LR4-10 is fully compliant with IEEE 802.3bs and 400GAUI-8 standards, ensuring reliable and efficient data transmission.

The QDD400G-LR4-10 features advanced DDM capabilities, accessible via a 2-wire serial interface, enabling real-time monitoring of key parameters such as temperature, voltage, and optical power.

With low power consumption and a compact QSFP-DD form factor,the QDD400G-LR4-10 is a cost-effective and energy-efficient solution for high-speed networking needs. Its robust design and compliance with environmental standards make it a dependable choice for modern network operators seeking to enhance their infrastructure with reliable, high-performance connectivity. The duplex LC interface ensures seamless integration into existing network setups, providing a versatile and future-proof solution for long-distance, high-bandwidth applications.

### **Product performance Specifications**

#### 1. Basic Product Characteristics

Parameter	Symbol	Min	Тур.	Max	Unit
Storage Temperature	Ts	-40	-	+85	°C
Supply Voltage	Vcc	-0.5	-	3.6	V
Relative Humidity	RH	5	-	85	%
Operating Case Temperature	T <sub>C</sub>	0	-	70	°C
Power Supply Voltage	Vcc	3.135	3.3	3.465	V
Power Supply Current	Icc			4000	mA
Power Dissipation	PD	-	-	9	W
Data Rate	DR	-	425	-	Gbps
Transmission Distance	-	-	-	10	km

Stressed Conditions of Stress Receiver Sensitivity Test (Note 12)					
Stressed Eye Closure for PAM4 (SECQ), Lane under Test		3.4	dB		
OMA <sub>outer</sub> of each Aggressor Lane		1.5	dBm		

Note1:EC provided by host system.

Note2:FEC required on host system to support maximum transmission distance.

Note3: With the exception to IEEE 802.3bs 120E.3.1.2 that the pattern is PRBS31Q or scrambled idle.

Note4: Meets BER specified in IEEE 802.3bs 120E.1.1.

Note5:DC common mode voltage generated by the host. Specification includes effects of ground offset voltage.

**Note6**: Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note7: Even if the TDECQ<1 dB, the OMAouter (min) must exceed the minimum value specified here.

Note8:The receiver shall be able to tolerate, without damage, continuous exposure to an optical input signal having this average power level.

Note9: Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note10: Receiver Sensitivity OMAouter, each lane (max) is informative and is defined for a BER of 2.4x10-4.

Note11: Measured with conformance test signal at receiver input for the BER of 2.4x10-4.

Note12: These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

Note1:QSFP-DD uses common ground (GND)for all signals and supply (power). All are common within the QSFP-DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.

Note2:VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Requirements defined for the host side of the Host Card Edge Connector are listed in Table 6. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 may be internally connected within the module in any combination. The connector Vcc pins are each rated for a maximum current of 1000 mA.

Note3:All Vendor Specific, Reserved and No Connect pins may be terminated with 50 ohms to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module. Vendor specific and Reserved pads shall have an impedance to GND that is greater than 10 Kohms and less than 100 pF.

Byte	Unit	Name	Description			
	Lower Page 00h					
0	1	Identifier	Identifier - Type of Serial Module - See SFF-8024.			
1	1	Revision Compliance	Identifier – CMIS revision; the upper nibble is the whole number part and the lower nibble is the decimal part.  Example: 01h indicates version 0.1, 21h indicates version 2.1.			
2-3	2	ID and Status Area	Flat mem indication, CLEI present indicator, Maximum TWI speed,			

			Current state of Module, Current state of the Interrupt signal.
4-7	4	Lane Flag Summary	Flag summary of all lane flags on pages 10h-1Fh.
8-13	6	Module-Level Flags	All flags that are not lane or data path specific.
14-25	12	Module-Level Monitors	Monitors that are not lane or data path specific.
26-30	5	Module Global Controls	Controls applicable to the module as a whole
31-36	6	Module-Level Flag Masks	Masking bits for the Module-Level flags
37-38	2	CDB Status Area	Status of most recent CDB command
39-40	2	Module Firmware Version	Module Firmware Version.
41-63	23	Reserved Area	Reserved for future standardization
64-82	19	Custom Area	Vendor or module type specific use
83-84	2	Inactive Firmware Version	Version Number of Inactive Firmware. Values of 00h indicates module supports only a single image.
85-117	33	Application Advertising	Combinations of host and media interfaces that are supported by module data path(s)
118-125	8	Password Entry and Change	Password Entry and Change
126	1	Bank Select Byte	Bank address of currently visible Page
127	1	Page Select Byte	Page address of currently visible Page
		Up <sub>l</sub>	per Page 00h
128	1	Identifier	Identifier - Type of Serial Module - See SFF-8024.
129-144	16	Vendor name	Vendor name (ASCII)
145-147	2	Vendor OUI	Vendor IEEE company ID
148-163	16	Vendor PN	Part number provided by vendor (ASCII)
164-165	8	Vendor rev	Revision level for part number provided by vendor (ASCII)
166-181	10	Vendor SN	Vendor Serial Number (ASCII)
182-183	2	Date code year	ASCII code, two low order digits of year (00=2000)
184-185	2	Date code month	ASCII code digits of month (01=Jan through 12=Dec)
186-187	2	Date code day of month	ASCII code day of month (01-31)
188-189	2	Lot code	ASCII code, custom lot code, may be blank
190-199	10	CLEI code	Common Language Equipment Identification code
200-201	2	Module power characteristics	Module power characteristics
202	1	Cable assembly length	Cable assembly length
203	1	Media Connector Type	Media Connector Type
204	1	5 GHz attenuation	Passive copper cable attenuation at 5 GHz in 1 dB increments
205	1	7 GHz attenuation	Passive copper cable attenuation at 7 GHz in 1 dB increments
206	1	12.9 GHz attenuation	Passive copper cable attenuation at 12.9 GHz in 1 dB increments
207	1	25.8 GHz attenuation	Passive copper cable attenuation at 25.8 GHz in 1 dB increments
208-209	2	Reserved	Reserved
210-211	2	Cable Assembly Lane Information	Cable Assembly Lane Information

213-220 221 222	8 1	Reserved	Reserved
	1		Reserved
222		Custom	Custom
	1	Checksum	Includes bytes 128-221
223-255	33	Custom Info NV	Custom Info NV
		Page	01h (Optional)
128	1	Inactive Module firmware major revision	Numeric representation of inactive module firmware major revision
129	1	Inactive Module firmware minor revision	Inactive Module firmware minor revision
130	1	Module hardware major revision	Module hardware major revision
131	1	Module hardware minor revision	Module hardware minor revision
132	1	Length (SMF)	Bits7-6 Length multiplier(SMF),Bits 5-0 Base Length (SMF)
133	1	Length (OM5)	Link length supported for OM5 fiber, units of 2 m (2 to 510 m)
134	1	Length (OM4)	Link length supported for OM4 fiber, units of 2 m (2 to 510 m)
135	1	Length (OM3)	Link length supported for EBW 50/125 $\mu m$ fiber (OM3), units of 2m (2 to 510 m)
136	1	Length (OM2)	Link length supported for 50/125 $\mu m$ fiber (OM2), units of 1m (1 to 255 m)
137	1	Reserved	Reserved
138-139	2	Nominal Wavelength	Nominal Wavelength
140-141	2	Wavelength Tolerance	Wavelength Tolerance
142-144	3	Implemented Memory Pages and Durations advertising	Implemented Memory Pages and Durations advertising
145-154	10	Module Characteristics advertising	Module Characteristics advertising
155-156	2	Implemented Controls advertising	Implemented Controls advertising
157-158	2	Implemented Flags advertising	Implemented Flags advertising
159-160	2	Implemented Monitors advertising	Implemented Monitors advertising
161-162	2	Implemented Signal Integrity Controls advertising	Implemented Signal Integrity Controls advertising
163-166	4	CDB support advertising	CDB support advertising
167-168	2	Additional Durations advertising	Additional Durations advertising
169-175	7	Reserved	Reserved
176-190	15	Module Media Lane advertising	Coded 1 if the Application is allowed to begin on a given media lane. Bits 0-7 correspond to Host Lanes 1-8. In multi-lane Applications each instance of an Application shall use contiguous media lane numbers. If multiple instances of a single Application are allowed each starting point is identified. If multiple instances are advertised,

			all instance must be supported concurrently.
191-222	32	Custom	Custom
223-250	28	Extended Module Host-Media Interface Advertising options	Extended Module Host-Media Interface Advertising options
251-254	4	Reserved	Reserved
255	1	Checksum	Checksum
		Page	02h (Optional)
128-129	2	Temperature monitor high alarm	
130-131	2	Temperature monitor low alarm	
132-133	2	Temperature monitor high warning	Thresholds for internally measured temperature monitor: signed 2's complement in 1/256 degree Celsius increments
134-135	2	Temperature monitor low warning	
136-137	2	Supply 3.3-volt monitor high alarm	
138-139	2	Supply 3.3-volt monitor low alarm	Thresholds for internally measured 3.3 volt input supply voltage: in
140-141	2	Supply 3.3-volt monitor high warning	100 μV increments
142-143	2	Supply 3.3-volt monitor low warning	
144-145	2	Aux 1 monitor high alarm	Thresholds for TEC Current or Reserved monitor TEC Current:
146-147	2	Aux 1 monitor low alarm	signed 2's complement in 100/32767% increments of maximum TEC
148-149	2	Aux 1 monitor high warning	current
150-151	2	Aux 1 monitor low warning	+32767 is max TEC current (100%) – Max Heating -32767 is min TEC current (100%) – Max Cooling
152-153	2	Aux 2 monitor high alarm	Thresholds for TEC Current or Laser Temperature monitor TEC
154-155	2	Aux 2 monitor low alarm	Current: signed 2's complement in 100/32767%increments of
156-157	2	Aux 2 monitor high warning	maximum TEC current +32767 is max TEC current (100%) – Max Heating
158-159	2	Aux 2 monitor low warning	-32767 is min TEC current (100%) – Max Cooling  Laser Temperature: signed 2's complement in 1/256 degree Celsius increments
160-161	2	Aux 3 monitor high alarm	Thresholds for Laser Temperature or additional supply voltage
162-163	2	Aux 3 monitor low alarm	monitorLaser Temperature: signed 2's complement in 1/256 degree
164-165	2	Aux 3 monitor high warning	Celsius increments
166-167	2	Aux 3 monitor low warning	NOTE: Laser Temp can be below 0 if uncooled or in Tx Disable.Additional supply voltage monitor: in 100 μV increments
168-169	2	Custom monitor high alarm	
170-171	2	Custom monitor low alarm	Custom monitor: signed or unsigned 16 bit value
172-173	2	Custom monitor high warning	Castern monitor, digition of unbigition to bit value
174-175	2	Custom monitor low warning	

176-177	2	Tx optical power high alarm	Threshold for Tx optical power monitor: unsigned integer in 0.1 uW
178-179	2	Tx optical power low alarm	increments, yielding a total measurement range of 0 to 6.5535 mW
180-181	2	Tx optical power high warning	(~-40 to +8.2 dBm)See section 8.8.3 for monitor details including
182-183	2	Tx optical power low warning	accuracy
184-185	2	Tx bias current high alarm	
186-187	2	Tx bias current low alarm	Threshold for Tx bias monitor: unsigned integer in 2 uA increments,
188-189	2	Tx bias current high warning	times the multiplier from Table 8-33. See section 8.8.3 for monitor details including accuracy
190-191	2	Tx bias current low warning	details inoldering decardey
192-193	2	Rx optical power high alarm	
194-195	2	Rx bias current low alarm	Threshold for Rx optical power monitor: unsigned integer in 0.1 uW
196-197	2	Rx bias current high warning	increments, yielding a total measurement range of 0 to 6.5535 mW (~-40 to +8.2 dBm) See section 8.8.3 for accuracy.
198-199	2	Rx bias current low warning	( 40 to 10.2 dBill) occ section 0.0.0 for decuracy.
200-229	30	Reserved	Reserved
230-254	25	Custom	Custom
255	1	Checksum	Covers bytes 128-254

### **Test Center**

### 1. Performance Testing

Every fiber optic transceiver is thoroughly tested by the Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

#### **Optical Spectrum Inspection**

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- Mean WI: Center wavelength
- > Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

### **Optical Signal Quality Inspection**

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- BER: Bit error rate
- ER: Extinction Ratio

#### **Flow Pressure Test**

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

### 2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.

visual inspection

Microscopic inspection: 20X

**Microscopic inspection: 200X** 

**Reliability Verification** 

**Optical endface inspection** 

**OQC** Inspection

# **Order Information**
