

212.5Gb/s FR4 QSFP56 1310nm 2km Optical Transceiver

P/N: QSFP200G-FR4-2

Features

- Hot Pluggable QSFP56 form factor
- Operating data rate 212.5Gb/s
- Single +3.3V power supply
- LC duplex connector
- Max power dissipation 6.5W
- Up to 2km transmission on single mode fiber
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- QSFP56 MSA
- Compliant with QSFP Electrical MSA SFF-8636
- Compliant with QSFP Mechanical MSA SFF-8665
- IEEE 802.3bm
- RoHS

Applications

- Switches with QSFP56 ports
- Router with QSFP56 Ports
- Server or Network Adapter Card
- Optical Transmission System
- Other devices with QSFP56 Ports

Description

The QSFP200G-FR4-2 is a QSFP56 transceiver compliant withe IEEE 802.3bs 200GBASE-FR4 standard, engineered for 2km single-mode fiber (SMF) transmission. It converts 4x50Gb/s PAM4 electrical lanes into 4 CWDM optical channels, multiplexed into a single 200Gb/s PAM4 stream. Reverse operation demultiplexes incoming 200G signals into 4 electrical outputs, enabling bidirectional 200G data transfer. Designed for metro-edge and data center interconnects, it features a duplex LC connector for optical interface and a 38-pin QSFP56 MSA-compliant electrical interface.

Leveraging CWDM technology and SMF compatibility, the module minimizes chromatic dispersion over 2km distances. Host Forward Error Correction (FEC) ensures error-free transmission, critical for long-haul applications. Integrated digital diagnostics monitoring (DDM) via I2C enables real-time tracking of temperature, voltage, and optical power, optimizing network reliability and maintenance.

Built to QSFP56 MSA specifications, the module ensures seamless integration with high-density switches and routers. Its robust construction withstands harsh operating conditions, including extreme temperatures, humidity, and EMI interference. With RoHS compliance and low power efficiency, the QSFP200G-FR4-2 delivers a scalable, future-proof solution for 200G Ethernet, cloud networks, and carrier-grade infrastructure.

Product performance Specifications

1. Basic Product Characteristics

| Parameter | Symbol | Min | Тур. | Max | Unit |
|--------------------------------------|----------|-------|-------|-------|------|
| Storage Temperature | Ts | -40 | - | +85 | °C |
| Supply Voltage | V_{CC} | -0.5 | - | 4.0 | V |
| Relative Humidity | RH | 5 | - | 85 | % |
| Operating Case Temperature | Tc | 0 | - | 70 | °C |
| Power Supply Voltage | Vcc | 3.135 | 3.3 | 3.465 | V |
| Data Rate | | | 212.5 | | Gbps |
| Power Consumption | Р | | | 6.5 | W |
| Transceiver Power-on Initialize Time | | | | 2000 | ms |

Note1:GND is the symbol for signal and supply (power) common for the QSFP+ module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

Note2:Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements defined for the host side of the Host Edge Card Connector are listed in Table. Recommended host board power supply filtering is shown in Host board power supply circuit. Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP module in any combination. The connector pins are each rated for a maximum current of 500 mA.

Note3:High-speed signal interfaces require differential pairs (e.g. TX1+/TX1-) with tightly matched impedances (typically 100Ω). **Note4:**The management and control signals are based on LVTTL level logic and are used for functions such as module selection and reset.

Mechanical Dimension

Test Center

1. Performance Testing

Every fiber optic transceiver is thoroughly tested by the Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- Mean WI: Center wavelength
- > Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- **BER:** Bit error rate
- ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.

Reliability Verification

Optical endface inspection

OQC Inspection
